July 15, 2011

Progress Energy, Crystal River, FL

Colwill Engineering is honored to be selected by Duke Construction as a member of the design build team for an important new project for Progress Energy at it's Crystal River Plant. Consisting of four coal powered units and one nuclear unit, the Crystal River facility is one of the largest power generating facilities in the country.

The project is a new 73,000 square foot facility that allows for a significant upgrade and consolidation of multiple plant functions. Administrative offices, laboratories, control rooms and maintenance are all included in the new structure that promises to be a welcome addition to the facility.

The design for the project is being performed in collaboration with Carastro and Associates and is being targeted for LEED Silver certification by the USGBC. Project completion is scheduled for 2012.
